

DomainTest.productTest.set  
IdTest

supermarket.domain.Product.to  
String

supermarket.domain.Product.getId

```
graph LR; A[DomainTest.productTest.setIdTest] --> C[supermarket.domain.Product.getId]; B[supermarket.domain.Product.toString] --> C;
```

The diagram illustrates a mapping or dependency between three methods. On the left, there are two source methods: 'DomainTest.productTest.setIdTest' and 'supermarket.domain.Product.toString'. Arrows from both of these methods point to a single target method on the right: 'supermarket.domain.Product.getId'. The target method is highlighted with a gray background, while the source methods have white backgrounds.
